Come to AI:X Lab's matchmaking event

Artificial intelligence (AI) is shaping the society of the future with new opportunities and dilemmas, and it is natural that we as a university take a leadership role in this area. At AAU, we are a leader in AI research, supported by interdisciplinary initiatives such as "AI for the People". AI is one of the most groundbreaking technologies of our time. By investing heavily in AI research, AAU helps drive innovation and technological development, which can lead to new discoveries and solutions to complex problems. AI can help tackle some of the biggest societal challenges we face today, for example in health and climate.

If you are interested in AI research and in contributing to AAU's effort in AI:X Labs then you should participate in this event.
