Samlet status

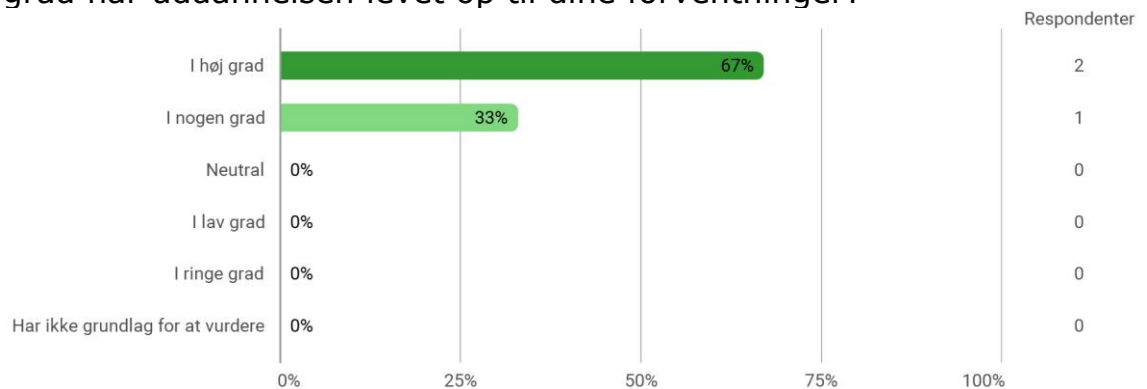

Forventer du at afslutte uddannelsen/har du afsluttet/ denne sommer?

Hvad er årsagen til, at du ikke forventer at afslutte din uddannelse denne sommer?

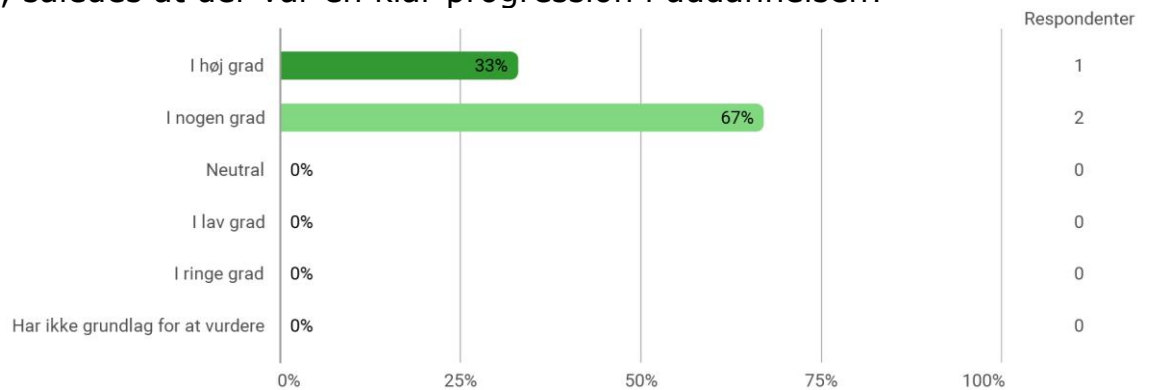

I hvilken grad har uddannelsen levet op til dine forventninger?

Yderligere kommentarer vedr. dine forventninger til uddannelsen?

- I was expecting more It- related content like for example more programming like Java Script or Python/R, however we have got subjects related to pedagogical and learning something crap, which totally waste of time and absolutely useless in practice (at job)

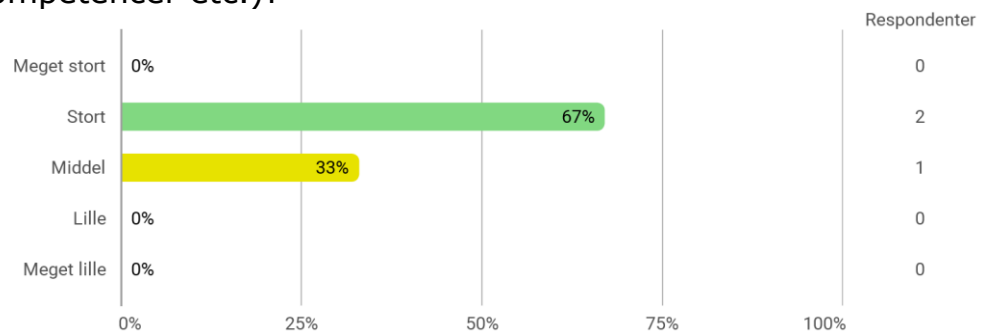

I hvilken grad vurderer du, at uddannelsens moduler/kurser lå i forlængelse af hinanden, således at der var en klar progression i uddannelsen?

Yderligere kommentarer vedr. progressionen i uddannelsen?

- I would say, that many of the things were clearly repetition of what I had on my BA. I think it should be more prototyping and UX elements knowledge, cognitivism and human behaviour content

Hvordan har dit faglige udbytte af hele uddannelsen været (fx. i form af viden, nye forstærkede kompetencer etc.)?

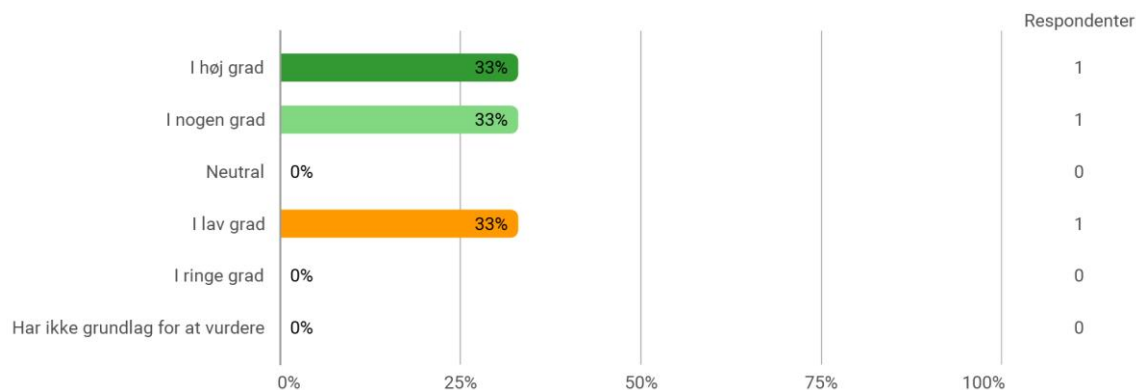

Yderligere kommentarer vedr. dit faglige udbytte af hele uddannelsen?

- I don't understand the question. The benefit is diploma for me, but I could also stand with my BA and start to work full time. Sometimes, I think it would be even better than starting my Master, because companies now value more experience than education (in IT)

I hvor høj grad var studiet tilrettelagt således, at du kunne opfylde uddannelsens læringsmål (kompetenceprofil)? - Se evt. uddannelsens studieordning: <https://studieordninger.aau.dk/>

Yderligere kommentarer vedr. læringsmål?

- Besides programming, gamification, machine learning, data science topics, I don't think there was anything I could use in real life

Yderligere kommentarer til dit uddannelsesforløb?

- It would be nice if the supervisor would be more interested in helping during master thesis period and not criticise students who really work hard only for acknowledging problem, that one of the thesis group's member is doing nothing.
- Uddannelsen giver gode muligheder for at specialisere sig og arbejde med problemstillinger, som man interesserer sig for. Derudover er den store projekt-del af uddannelsen yderst givende, da det har givet mulighed for at arbejde med virkelige problemstillinger og dermed arbejde med teorien i praksis.
